SUMMARY

Computer Science undergraduate at SRM Institute of Science and Technology with hands-on experience building AI-powered applications, backend services, and data-processing systems. Skilled in Python, C/C++, SQL, REST API development, and machine learning, with project experience in real-time applications, automated financial diagnostics, and intelligent log classification. Interested in developing reliable, scalable software through strong problem-solving and software engineering fundamentals.

EDUCATION

SRM Institute of Science and Technology *Aug 2023 – Present*
B.Tech in Computer Science CGPA: 8.92

SKILLS

Programming Languages: Python, C++, C, JavaScript, SQL

Software Engineering: Data Structures & Algorithms, Object-Oriented Programming, REST APIs, Backend Development, API Integration

Backend & Databases: FastAPI, PostgreSQL, SQLite, SQLAlchemy, Asynchronous Processing

AI & Machine Learning: PyTorch, Scikit-learn, Pandas, NumPy, Transformers, BERT, CNNs

Developer Tools: Git, GitHub, Jupyter Notebook, Google Colab

EXPERIENCE

Winter Research Intern *Certificate*
University of Ilorin, Nigeria

- Conducted research on a point-of-care diagnostic concept for early heart-attack detection using cardiac biomarkers.
- Explored a proposed diagnostic methodology involving ELISA detection, microfluidics, and machine-learning concepts.
- Contributed to research documentation and work that received official copyright protection.

PROJECTS

Multilingual Bus Tracking Platform | React, FastAPI *Link*

- Developed a full-stack bus-tracking application using React and FastAPI, enabling live location transmission and periodic location updates.
- Built REST APIs for location data exchange, implemented error handling for location updates, and integrated multilingual voice assistance to improve accessibility.

Hybrid Log Classification System | Python, BERT, Sentence Transformers, LLMs *Link*

- Developed a hybrid log-classification pipeline combining rule-based methods, transformer-based models, and LLM-based classification to categorize application logs.
- Implemented condition-based routing across classification methods and evaluated classification performance on a labeled dataset using measured metrics.

SmartFlow: AI-Native SME Financial Diagnostics & Credit Scoring Platform | Python, FastAPI *Link*

- Built data-ingestion pipelines to normalize bank statements, ledger exports, and GST records into a unified financial dataset for SME financial analysis.
- Developed cash-flow forecasting and explainable credit-scoring workflows using Prophet, a weighted moving-average fallback, and XGBoost with SHAP; achieved a reported forecasting MAPE of 11.4% and credit-scoring AUC of 0.909.

RESEARCH & ACHIEVEMENTS

International Conference Presenter – ICICDT 2026 *Apr 2026*
Certificate

- Presented research on AI-based system design for financial forecasting.

Smart India Hackathon 2025 – Internal Finalist

- Ranked among top 75 teams out of hundreds at university level.

Assistant Head – PR & Management, Logic Play Club

- Coordinated team activities and event management initiatives.
